

INDUSTRIAL FLUID MANAGEMENT ACCESSORIES

COOLANT PROPORTIONER

Designed for mixing liquid coolant concentrate with water for supply to machines.

- Lightweight aluminum body
- NO PLASTIC PARTS
- Driven by pressure from water supply
- Rotary disc valve, precision CNC machined from stainless steel and highly accurate
- Compact construction and minimal parts make these mixers easy to install and highly reliable
- Includes full flow Brass Ball valve and also fitted with 2 back flow preventers
- Adjustment of mixing ratio is variable and controlled through a simple turn of the knob

REFRACTOMETER, Manual and Electronic

Refractometers are precision optical instruments used for measuring concentrations of substances in aqueous solutions. They work by using the principle of light refraction through liquids. Refractometers measure concentration and oil emulsion. Concentration will appear as the horizontal line on the brix scale.

BARRIER CREAM

Stokoderm Advanced Barrier Cream - This skin defense cream protects the skin from varying types of oil and water based substances while facilitating skin cleansing.

SUMP DEODORIZING TABLETS

SDT odor eliminating tablets are designed to be used in small sumps, usually of 200 gallons or less to eliminate and prevent odors such as hydrogen sulfide, i.e. rotten egg odors. SDT also reduces the biofilm, a breeding ground for bacteria and fungi as well as neutralizes endotoxins released from the micro-organisms found in metalworking fluids. They contain no formaldehyde or formaldehyde-releasing chemicals of any kind. Safe and easy to use, SDT is the most effective way to control odors in any water-based system.
